TOXICOLOGY

VOLUME CONTENTS

Volume 64 (1990)

Nickel induced lipid peroxidation in the rat: Correlation with nickel effect on antioxidant defense systems **(Depletion of intracellular glutathione following nickel treatment may make tissues more vunerable to peroxides)**
by M. Misra, R.E. Rodriguez and K.S. Kasprzak (Frederick, MD) ..... 1—17

Effects of heavy metals on alpha-fetoprotein in maternal sera and amniotic fluid of pregnant mice **(In pregnant mice, lead impedes placental permeability of AFP)**
by G.J. Mizejewski, D.E. Antelman, J.F. Keenan and I.L. Preiss (Albany and Troy, NY) ..... 19—32

Early induction of reparative hyperplasia in the liver of B6C3F1 mice treated with dichloroacetate and trichloroacetate **(The carcinogenic effect of TCA may involve damage to DNA)**
by I.M. Sanchez and R.J. Bull (Pullman, WA) ..... 33—46

Increased expression of c-myc and c-H-ras in dichloroacetate and trichloroacetate-induced liver tumors in B6C3F1 mice **(Elevated expression of the two oncogenes may play a role in tumor development)**
by M.A. Nelson, I.M. Sanchez, R.J. Bull and S.R. Sylvester, (Pullman, WA) ..... 47—57

Prevalence of metallothioneinuria among the population living in the Kakehashi River basin in Japan — an epidemiological study **(Metallothioneinuria can be used as an indicator of renal dysfunction caused by environmental Cd exposure)**
by Z.A. Shaikh, T. Kido, H. Kito, R. Honda and K. Nogawa, (Kingston, RI, Chiba and Ishikawa, Japan) ..... 59—69

Subchronic 90 day toxicity of dichloroacetic and trichloroacetic acid in rats **(TCA and DCA produce damage to the liver and kidney, although only at doses greater than expected to be in the environment)**
by G.G. Mather, J.H. Exon and L.D. Koller (Moscow, ID and Corvallis, OR) ..... 71—80

Mercury induced UDP-glucuronyltransferase (UDPGT) activity in mouse kidney **(Mercury-induced UDPGT activity)**
by T.M.C. Tan, Y.M. Sin and K.P. Wong (Singapore, Singapore) ..... 81—87

Cadmium teratogenicity and its relationship with metallothionein gene expression in midgestation mouse embryos **(Cd teratogenicity reflects damage to maternal or extraembryonic tissue, although it is possible that certain cells in the embryo are exceptionally sensitive to Cd too)**
by S.K. De, S.K. Dey and G.K. Andrews (Kansas City, KS) ..... 89—104

Contents of journals relating to Toxicology ..... 105—107

Announcements ..... 109—111

The interactions of *cis*-diamminedichloroplatinum with metallothionein and glutathione in rat liver and kidney **(There is no interaction between metallothionein and platinum and glutathione depletion does not enhance renal toxicity)** by C.A.M. Suzuki and M.G. Cherian (Ontario, Canada) ..... 113—127

Beneficial effects of zinc supplementation during chelation treatment of lead intoxication in rats **(Zinc very slightly augments lead decorporation by chelators)** by S.J.S. Flora and S.K. Tandon (Lucknow, India) .... 129—139

Effect of acetone administration on renal, pulmonary and hepatic monooxygenase activities in hamster **(Three percent acetone in drinking water induce cytochrome *P*-450IIE1)** by S. Menicagli, P. Puccini, V. Longo and P.G. Gervasi (Pisa, Italy) ..... 141—153

Developmental toxicity of in utero exposure to toluene on malnourished and well nourished rats **(Malnutrition increases susceptibility of the developing skeleton to toluene)** by V.A. da Silva, L.R. Malheiros, F.J.R. Paumgartten, M. de Matos Sa-Rego, T.R. Riul and M.A.R. Golovattei (Niteroi, Brazil) ..... 155—168

Immune alterations in rats following subacute exposure to tributyltin oxide **(T lymphocytes appear to be a primary target)** by R.J. Smialowicz, M.M. Riddle, R.R. Rogers, R.W. Luebke, C.B. Copeland and G.G. Ernst (Research Triangle Park, NC) ..... 169—178

Excretion and blood radioactivity levels following [^{14}C]senecionine administration in the rat **(Senecionine is eliminated from plasma while being retained by erythrocytes and is rapidly metabolized to senecionine *N*-oxide)** by J.E. Estep, M.W. Lamé and H.J. Segall (Davis, CA) ..... 179—189

Arsenic-cadmium interaction in rats **(Various interactions between the two metals are described)** by F. Díaz-Barriga, E. Llamas, J. de Jesus Mejía, L. Carrizales, M.E. Santoyo, L. Vega-Vega and L. Yáñez (San Luis Potosí, Mexico) ..... 191—203

Renal, hepatic, cadiac and thymic acute toxicity afforded by bis(helenalinyl)malonate in BDF_1 mice **(The profile of toxic effects is given)** by I.H. Hall, A.A. Grippo. D.J. Holbrook, J.-J. Chang, L-M. Yang, S.G. Chaney and K.-H. Lee (Chapel Hill, NC) ..... 205—216

Book Reviews ..... 217—221

Metabolism and pulmonary toxicity of intratracheally instilled cupric sulfate in rats **(Half-life of intratracheally instilled Cu in lung is 7.5 hours and inflammatory changes develop within 1 to 3 days)** by S. Hirano, S. Sakai, H. Ebihara, N. Kodama and K.T. Suzuki (Ibaraki, Japan) ..... 223—233

Delayed nephrotoxic effects of cadmium and their reversibility by chelation **(Chelation is only effective when administered early after Cd exposure)** by J.Y. Zhao, E.C. Foulkes and M. Jones (Cincinnati, OH and Nashville, TN) ..... 235—243

Toxicity modification of sodium selenite by a brief exposure to heat or cold in mice **(Hepatic or renal glutathione levels failed to provide a clue why heat or cold would modify toxicity)** by C. Watanabe, T. Suzuki and N. Matsuo (Sendai and Tokyo, Japan) ..... 245—253

Measurement of steady-state blood concentrations in $B6C3F_1$ mice exposed by inhalation to vinylidene fluoride **(The validity of a physiological model developed for rats is tested in mice)** by M.A. Medinsky, W.E. Bechtold, L.S. Birnbaum and R.E. Henderson (Albuquerque, NM and Research Triangle Park, NC) ..... 255—263

Changes in brain serotonin and 5-hydroxyindolacetic acid levels induced by 2,4-dichlorophenoxyacetic butyl ester **(Changes were found in the brains of adult rats and of rats exposed during lactation)** by A.M. Evangelista de Duffard, M.N. de Alderete and R. Duffand (Cordoba, Argentina,) ..... 265—270

Hepatic and extra hepatic glutathione depletion and glutathione-*S*-transferase inhibition by monocrotophos and its two thiol analogues **(Organs examined include liver, brain, kidney, lung heart and spleen)** by M.K.J. Siddiqui, M. Mahboob and M. Mustafa (Hyderabad, India) ..... 271—279

Butylated hydroxyanisole (BHA) does not cause forestomach hyperplasia by inhibiting the release of gastric mucus **(Evidence for the statement given in the title is provided by microscopic observation, serotoninergic increase in the gastric mucosa)** by V. Lauriault, P. Grasso and C.J. Powell (Surrey, UK) ..... 281—290

Species differences in renal γ-glutamyl transpeptidase activity do not correlate with susceptibility to 2-bromo-(diglutathion-*S*-yl)-hydroquinone nephrotoxicity **(Interspecies differences in susceptibility may have a biochemical or physiological basis)** by S.S. Lau, T.W. Jones, R. Sioco, B.A. Hill, R.K. Pinon and T.J. Monks (Austin, TX and Baltimore, MD) ..... 291—311

Effects of chronic exposure to ozone on pulmonary lipids in rats **(No evidence was found to document that chronic ozone exposure would result in a deficient surfactant system)** by E.S. Wright, D.M. White and K.L. Smiler (Warren, MI) ..... 313—324

Uneventful self poisoning with a very high dose of captopril **(A massive overdose of captopril was tolerated without serious side effects)** by P. Lechleitner, A. Dzien, C. Haring and H. Glossmann (Innsbruck, Austria) ..... 325—329

Contents of journals relating to Toxicology ..... 331—337

Subject Index Volume 64 ..... 339—342

Author Index Volume 64 ..... 343—344

Volume Contents Volume 64 ..... 345—346
